## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Meincer in view of Lawson. The patent to Meincer teaches structure substantially as claimed including a base (10), support structure comprising a flexible film wrapped around one of the multiple layers around a first and a second axis, the first and second axis being perpendicular to each, the axis in the same plane, in as much as the instant invention's, the only difference being that the base is not adhered to the film. However, the patent to Lawson teaches the use of base members (60) adhesively attached to a package system to provide a unitary structure. It would have been obvious and well within the level of one having ordinary skill in the art to modify the structure of Meincer to include an adhesively mounted base structure, as taught by Lawson since such

structure is used in the same intended purpose of providing a unitary package structure, thereby providing structure as claimed. The use of particular materials, such as plastics, foam etc are conventional materials used in the formation of pallets. To use such materials would have been obvious and well within the level of ordinary skill in the art. The percentage of coverage is a matter of desirability and would have been obvious and well within the level of ordinary skill in the art. The method of producing the pallet would have been obvious in view of the structures.

### ***Response to Arguments***

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Burns, III, Lambert, Magnant et al, deGroot, Winski teach structure similar to applicant's.
